

HF MOCK INCIDENT TRAINING

Honeywell

An important aspect of Honeywell's commitment to safe and reliable transportation of hydrofluoric (HF) acid is emergency preparedness. We offer on-site HF training that includes mock incidents so customers and local emergency responders receive hands-on practice addressing realistic scenarios.

EMERGENCY PREPAREDNESS THROUGH REALISTIC TRAINING

Provided by Honeywell's training experts, a "mock incident" simulates an HF emergency at your location using Honeywell training props. Both Anhydrous and Aqueous HF training trailers and a railcar protective housing prop are available to be used. Some benefits of our hands-on Mock Incident Training include:

- A realistic simulation tailored to meet your needs
- The agreed upon training props are sent to your location on a mutually agreed date
- Responders have the opportunity to practice HF emergency response safely and efficiently
- In collaboration with you, Honeywell experts oversee the mock incident from start to finish
- Feedback is provided post-event

HANDS-ON PRACTICE IMPROVES RESPONDER READINESS

When it comes to gaining the confidence and expertise to effectively handle an HF emergency, hands-on practice in realistic conditions is essential. Honeywell's Mock Incident Training provides a unique experience that is unmatched in the industry.

- Honeywell training equipment is the same as what responders would see at a real incident
- Participants become familiar with protective equipment worn during an HF emergency
- Honeywell experts closely monitor the training to prevent potentially unsafe conditions

For more information

If you have questions or would like to schedule Mock Incident Training, please contact your Honeywell Account Manager or HF Technical Services Manager. To register for HF training courses or online seminars, visit: www.honeywell-hfacid.com
